PROJECTS

Video Analytics

July 2022

Video analytics system aims to provide security as well as statistics about customer movements in the organization's premises. The organization will be able to interpret these statistics to make better business decisions which in turn will profit the organization. The proposed system is expected to work with the existing camera installations, making it extremely easy and cheap to set up.

E-Buddy for Child Labour Rescue

February 2022 - April 2022

The project address the issue of Child Trafficking and Child Labour by an effectively developed system for tracking of rescued child.

Discord Bots

March 2021 - July 2021

Discord bots are developed using Python language which accepts commands to play tic tac toe game, audio from YouTube and also few rules to maintain peace. Using these bots helps one to do multiple things at a time in discord application itself.

Aquarium Website

November 2020 - April 2021

Aquarium website is a frontend based project developed using HTML, CSS and Javascript. Unlike other websites our website covers everything at one place, from location of aquarium to booking tickets. Website is on Netlify so that one can easily access it.
